NMEBINE GIIZIS

Sucker Moon

The fourth moon of creation is the Sucker Moon.

According to the Anishinaabe, the Sucker fish ventures into the spirit world to acquire cleansing techniques. It then purifies a path for spirits by cleansing the water.

In harsh winters, the Sucker fish becomes a vital food source. By consuming the fish, we share in the spirit world's knowledge, learning to become healers ourselves. It reminds us to honour and respect the gifts provided by the natural world, which sustain and enrich our lives.
