WAABAGAA GIIZIS

Changing Leaves Moon

The Tenth Moon of Creation is the Changing Leaves Moon.

During this time, gardens rest as trees sense shorter days and enter dormancy. Creation honours Mother Earth by gracing her with exquisite leaves of splendid colours, each placed with gentleness. As Creation offers homage, we're reminded of surrounding miracles, reawakening our spiritual energies. Indigenous communities - through tributes and admiration of foliage - reignite their connection to Creation. This transcendent link renews awareness of spiritual energies in all life.

The Changing Leaves Moon brings introspection and enlightenment, recognizing both Creation's marvels and our rightful place within it.
